...overhead reduced

## 4 NEW

...innovative way to group and label user accounts  
...services to the network you are operating for your customer

# Arch · Red Guest Server

Guest user management made easy.

Arch Red Guest Server is a software that enables your staff to create and manage guest user access to Internet **easily and securely**, and without straining the workload of your IT staff. This way you can provide a **cost-effective way** for guest user access to your customers and guests, as the guest user accounts can be created in **just 4 easy steps** with a basic web browser.

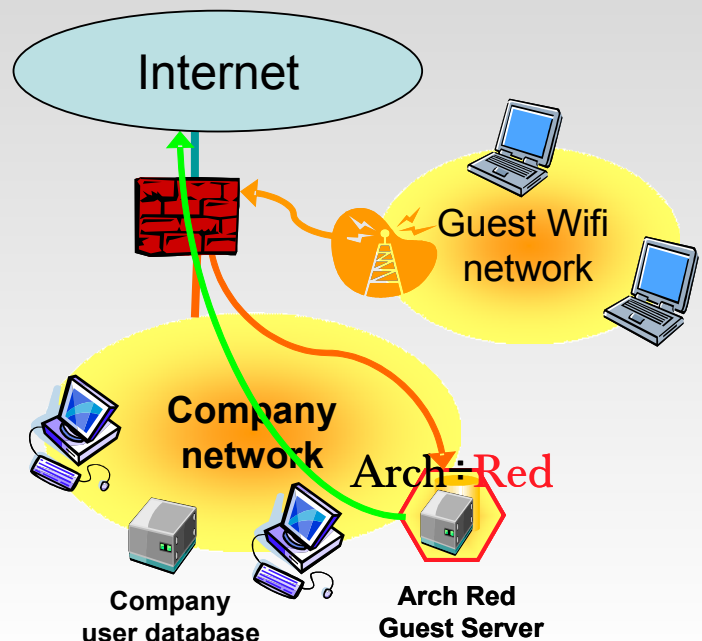

Arch Red Guest Server provides special value to those organisations that serve guests frequently in their own premises. With the product, **guests have a secure and individual access to the Wifi network** of the company, without compromising any of the critical services of the network. Also, the **guest user credentials are stored in their own SQL database**, ensuring the separation from your critical network components.

As Arch Red Guest Server uses standard RADIUS protocol, it is **easy to deploy also to an existing network** infrastructure. With Arch Red Guest Server, you are also ready to face future technological development, since the product is as a separate and easily integratable component of your network.

Arch Red Guest Server can also be used to **evolve your business** as it provides an easy way to offer a value-added service to your customer who wants to control the guest access of their network without heavy administrative input. Arch Red Guest Server provides an easy and secure way to **provide more customer based services** to a operator managed network.

Join the organisations using Arch Red Guest Server and try the product for free. You can **gain access for your 2-week trial** from the address: <http://www.archred.com/products>. After submitting your information, we will deliver you personal test user credentials for your online trial.

Please see the next page for **different versions** of Arch Red Guest Server.
